

In response to FEC letter dated February 23, 2011 regarding the amended July quarterly report, the increase in disbursements was due to checks that were reissued. The original checks were not recorded properly because they had not cleared the bank. When the reissued checks cleared the bank the checks were recorded when originally written. This error should not happen in the future due to the committee hiring a professional bookkeeper to properly record transactions and prepare correct and timely bank reconciliations.
